Good day, dear colleagues!

Synevyr National Nature Park, which is located in the central part of the Ukrainian Carpathians, borders 6 settlements with a population of about 22,000. The main type of fuel here is firewood, since the territory is not gasified, and every day there are blackouts due to the armed aggression of Russia. Every year, the local population collects firewood according to the limits set by the Ministry of Environmental Protection and Natural Resources.

NNP "Synevyr" felt the burden of disaster from the first days of the war. Many IDPs from the east and Kyiv region came to the region, for whom we tried to create comfortable living conditions, in particular, to provide heat in the premises.

To date, there is a need for the production of pellets at the "Synevyr" NPP, for the efficient use of wood waste, which would provide people with fuel and relieve the burden on forest.

We are asking the Government of Lithuania to hand over the pallet production line to us.

Sincerely,

director of Synevyr NNP

Mykola Derbak
